

Talking Science

July 25, 2017
Mike Hensen

Valentina Cabarique, 11, left, and Paige Van Overberghe, 12, tell London West MP Kate Young what they are learning at STEM (science, technology, engineering and mathematics) camp at Western University. Young, who is parliamentary secretary for science, visited the program Tuesday. The class of 21 girls is learning to build a model of a combination lock, a solar oven that uses sunlight to make smores, LEGO programming and other projects.
